

SECP1513 – Technology and Information System

Executive Summary

This poster summarizes the key insights from the industry talk provided by Clarity Techworks Sdn Bhd, a fintech company based in Singapore and Malaysia. The speakers shared the real industry experiences by explaining their organizational structure, technology stack, roles, responsibilities and skills required for different ICT positions. Hence, this talk clearly shown how ICT professionals contribute to fintech solutions and the competencies required to succeed in the industry.

Introduction

Nowadays, fintech industry is growing rapidly and highly dependent on Information and Communication Technology (ICT). Modern software development, cloud infrastructure and blockchain technology are leveraged by Clarity Techworks Sdn Bhd to deliver secure and efficient digital solutions. Through this industry talk, students are exposed to real-world ICT practices, industry expectations and career opportunities within a fintech environment.

Content of Talk

Company Background

- Fintech company based in Singapore and Malaysia
- Primary product – **Rapidz Pay** (cryptocurrency payment and digital assets ecosystem to support modern digital transactions)

Technology Stack Used

- **Mobile Development** : Swift, Kotlin
- **Web & API Development** : PHP (Laravel), Vue.js, Inertia.js, TypeScript
- **Databases** : MySQL, Redis, SQLite
- **DevOps** : CI/CD, automated testing
- **Infrastructure** : Linux, Nginx
- **Blockchain** : Solidity

Organization Structure

- Management
- HR & Admin
- Operations
- Compliance
- Marketing
- Web
- iOS
- Android
- UI/UX
- QA

Roles and Skills Shared

Android Developer

- **Job Scope**: Implement new features, improve project code, resolve bugs, publish apps to Google Play Store
- **Tools** : Android Studio, Google Play Console, Firebase Console, Postman, Bitbucket

UI/UX Designer

- **Job Scope**: UI/UX research, wireframing and prototyping, testing and iteration, create phrase keys and manage translations
- **Tools** : Figma, Slack, Phrase, Postmark

QA Testing Analyst

- **Job Scope**: Perform software testing to ensure product quality, document test results
- **Require** : analytical skills, documentation skills, time management, attention to details

Web Developer

- **Job Scope**: Produce APIs for internal and external use, troubleshoot backend issues
- **Tools**: VS Code, Postman, Bitbucket, Sourcetree, Jira, Slack, Sequel Ace

Reflection

In conclusion, we gained a deeper understanding of how ICT plays an important role in the fintech and blockchain industry. The sharing made by speakers with different job roles enable us to realize and understand that ICT careers need a balance of technical skills and personal qualities. Essential skills such as analysis, communication, creativity and continuous learning are required by the industry to solve real-world problems when working in teams. Overall, this talk motivated us to prepare ourselves for future ICT careers by improving and enhancing our technical knowledge and soft skills. Hence, this will allow us to play a meaningful role in driving innovation and supporting digital transformation in the future.
